PROFESSIONAL SUMMARY

Results-oriented Information Technology Analyst with 3.11 years of experience operating at the intersection of **Legacy Mainframe systems and Modern DevOps** practices within the **Banking and Financial Services domain**. Uniquely positioned for **Mainframe Modernization initiatives**, possessing deep **L2/L3 expertise** in COBOL, JCL, and DB2 **Payment systems**, while actively driving the transition to **Linux automation, CI/CD pipelines, and SRE principles**. Expert in Java 17+, Spring Boot, **Microservices** and React JS. Skilled in distributed systems, **Performance optimization**. Passionate about leveraging **Generative AI to modernize Root Cause Analysis (RCA)** and continuously expanding expertise in **Cloud platforms, Infrastructure-as-code and Java-based application ecosystems**.

CORE COMPETENCIES & TECHNICAL SKILLS

- **Operating Systems:** Linux (Redhat/Ubuntu), Mainframe z/OS, Windows.
 - **DevOps, Cloud and Modernization:** Jenkins, Ansible, Git, JFrog Artifactory, AWS, GCP, Azure, WinSCP, CyberArk.
 - **AI and Observability Stack:** Generative AI Integration, AppDynamics, ELK Stack (Kibana)
 - **Mainframe and Legacy Engineering:** JCL, COBOL, DB2, TSO/ISPF, Xpeditor, File-Aid, Endeavor, OPC/A, Connect Direct (REXX), IBM Utilities (IEBGENR, IDCAMS, DFSORT, IEBCOPY)
 - **Technical Languages :** Java 17+, JavaScript (ES6+), Spring Boot, Spring MVC, REST APIs, Microservices, API Gateway, Config Server
 - **Databases and Scripting:** Oracle (TOAD), Exadata, SQL Server, DB2, Advanced SQL Performance Tuning, Linux Shell Scripting, PowerShell
 - **ITSM and Security:** ITIL 4 Framework, SRE Foundations, ServiceNow, Jira Confluence, SSL Certificate Management
-

PROFESSIONAL EXPERIENCE

NTT DATA | Information Technology Analyst

Total Tenure: June 2022 – Present

Senior Information Technology Analyst | April 2025 – Present

- **Cross-Platform Automation:**
 - Bridge legacy and modern environments by orchestrating automated workflows that connect Mainframe batch outputs with Linux servers, utilizing Shell scripting and PowerShell for automated report generation.
 - Developed scalable microservices using Java 17 and Spring Boot for secure banking applications.
 - Built and optimized RESTful APIs, improving response time and system performance.
 - Integrated multiple backend services and third-party APIs in a distributed architecture.

- **AI-Driven Modernization of Support:**
 - Worked L3 escalation for critical banking payment failures; actively leveraging Generative AI tools to parse Mainframe dump logs, accelerating Root Cause Analysis (RCA) and automating repetitive SDLC documentation.
 - Performed root cause analysis and resolved production issues, ensuring high availability.
- **Deep Database Tuning:**
 - Perform advanced SQL Performance Tuning across both legacy Mainframe (DB2) and modern environments (Oracle/Exadata via TOAD) to optimize high-volume financial data processing and resolve payment discrepancies.
 - Improved performance through efficient queries, debugging, and caching strategies
- **SRE and Full-Stack Monitoring:**
 - Implement Site Reliability Engineering (SRE) practices using AppDynamics and Kibana to monitor both Z/OS and Linux application stacks, proactively identifying bottlenecks before business impact.
 - Collaborated with cross-functional Agile teams and contributed to code reviews and CI/CD pipelines
- **Security and Infrastructure:**
 - Lead secure data transfers using Connect Direct REXX and manage the end-to-end SSL certificate renewal lifecycle across Mainframe and Linux environments, ensuring zero-downtime for third-party integrations.
 - Led integration of Fraud net to strengthen fraud detection capabilities

Senior Associate Information Technology | June 2022 –April 2025

- **Deep Mainframe Production Support (L2/L3):** Managed heavy daily batch processing for corporate banking, troubleshooting and resolving complex JCL/COBOL abends, SOC7/SOC4 errors, and analyzing job logs via OPC/A and CA-7 Calendaring.
- **Code Deployment and SDLC:** Managed strict code movement pipelines through Endeavor stages, created deployment packages for Production, executed data mocking, and performed rigorous system testing using Xpeditior and File-Aid to ensure zero-defect releases. Collaborated with teams to design scalable and secure system architecture.
- **Database Manipulation:** Modified and tested SQL code, utilized File-Aid DB2 to retrieve and update tables per business specifications, and utilized IBM Mainframe Utilities (IEBGENR, DFSORT) for large-scale file processing.
- **ITIL Management:** Executed Incident, Problem, and Change management processes via ServiceNow and Jira, maintaining strict SLA compliance. Supported high-stakes weekend deployments, live production calls, and night/weekend support with onsite client coordination.
- **Continuous Service Improvement:** Actively identified manual, repetitive Mainframe tasks and proposed Linux/Shell scripting alternatives, demonstrating a proactive approach to self-learning and driving system modernization from the ground up. Developed real-time monitoring and alerting solutions for system performance.

KEY PROJECT HIGHLIGHTS

- Built microservices-based banking applications
- Implemented distributed integrations
- Used ELK for logging and monitoring
- Optimized performance for faster response time

TRAININGS & CERTIFICATIONS

- **AI and Modern Tech:** Certified GenAI Yellow Belt (Level 1) and White Belt
- **Operations and SRE:** Certified SRE Foundation and ITIL 4 Foundation
- **Application Development:** Certified Senior Application Developer, Mainframe Developer Level 2, Test Engineer and Test Practitioner
- **Business Analysis:** Certified Internal Business Analyst (BA) Level 1

EDUCATION

- **Bachelor of Technology (CSE)** | Greater Noida Institute of Technology | 2019-22 | **74.0%**
 - **Diploma (CSE)** | PM Polytechnic | 2015-18 | **69.09%**
-
